

## MICRO CURRENT NEUROFEEDBACK

### AT A GLANCE

#### Treatments

- 12 Sessions loading start
- 10-15 minutes
- Non-Invasive
- Regulate Brainwaves
- Performance Enhancing

IASIS MCN  
Neurofeedback got its  
name from the Greek  
word meaning Healing.

### WHAT IS NEUROFEEDBACK?

IASIS Neurofeedback is a form of biofeedback therapy. It's a technique in which you train the body to make adjustments to the autonomic nervous system. Neurofeedback started as an offshoot to biofeedback in the early 1990s. Biofeedback has been in use since the '50s.

### BENEFITS

Through trial and error, researchers found out that if you were able to get the current just right for each particular person, you could take away lots of problems that were resistant to other forms of therapy. Today we see great results with PTSD, traumatic brain injury (TBI), depression, anxiety, addictions, pain syndromes, and cognitive issues.
